00000000 0000000000000000:

Ketones are acids the body makes when it utilizes fat rather than glucose for energy. The body acquires the majority of its energy from glucose, a sugar that predominantly emanates from carbohydrates in the diet. If sufficient energy is not acquired by glucose, the body disintegrates fat and energy instead.

“

The normal structure of ketone is constituted as $R-C(=O)-R'$, where R and R' are carbon-entailing alternatives.”
