Trending Cell And Gene Therapy Market Trend

Chimeric antigen receptor (CAR) T-cell therapy is shaping the cell and gene therapy (CGT) market. (CAR) T-cell therapy is a combination of cell and gene therapy in which T cells are collected from the patient's blood and are genetically engineered to produce modified receptors at their surface, known as chimeric antigen receptors (CARs). These modified T cells have special structures (receptors) and are reinfused into the patient. Then, the modified receptors of T cells help in targeting the surface antigen of the cancer cell, ultimately resulting in the killing of

tumour cells in patients. In 2020, the US-FDA approved Bristol-Myers Squibb's two CAR-T cell therapies to treat lymphoma and multiple myeloma and is set to be launched. Currently, FDA-approved CAR-T cells therapy treatments like Tisagenlecleucel for the treatment of B-cell precursor acute lymphoblastic leukaemia (ALL) in children and Axicabtageneicel for the treatment of adult patients with relapsed or refractory large B-cell lymphoma.

[Cell And Gene Therapy Market Segments](#)

- By Type: Farm Machinery And Equipment Manufacturing, Lawn And Garden Tractor And Home Lawn And Garden Equipment Manufacturing.
- By Geography: The global cell and gene therapy market is segmented into North America, South America, Asia-Pacific, Eastern Europe, Western Europe, Middle East and Africa.
