Factors such as rising prevalence of skin issues and technological advancements in dermatology treatment devices boost the growth of the market. However, the risk of undesirable side effects associated with the use of dermatology treatment devices hinders the market growth.

The dermatology treatment devices market, by application, is segmented into skin resurfacing, skin rejuvenation, hair removal, psoriasis, scar, warts and skin tags, hyperpigmentation and vascular lesions, acne, tattoo removal, and hyperhidrosis. The skin rejuvenation segment held the largest share of the market in 2019, whereas the hair removal segment is anticipated to register the highest CAGR in the market during the forecast period.

Long working hours and changing lifestyle have contributed significantly to rise in stress levels, impacting the appearance of individuals, especially affecting their skin and hair. Also, the increasing pollution levels exert detrimental effects on an individual's physical appearance. RF roller and blue light devices can be used to manage acne problems caused by changes in environment or life styles. Customers are keen to experience beauty and wellness services to rejuvenate their body. Thus, international grooming products, as well as services offered at home, have gained popularity to a great extent.

The COVID-19 pandemic was first reported in December 2019 in Wuhan (China). The impacts of

this outbreak are being felt across several markets in the world. The demand for dermatology treatment devices has reduced amid this global crisis due to a significant shift in the focus toward the management, treatment and prevention of COVID-19. The pandemic is continuing to worsen around the world leading to massive disruptions in global supply chains, consumer markets, and economies, and these conditions are also restraining the growth of the dermatology treatment devices market.

Cutera Inc.; Bausch Health Companies Inc.; Sciton, Inc.; Lumenis; Alma Lasers; Cynosure, Candela Corporation; Biofrontera Ag; Avita Medical; and PhotoMedex are among the leading companies operating in the dermatology treatment devices market.

The report segments global dermatology treatment devices market as follows:

By ProductType

- Lasers
- Light Therapy Devices
- Cryotherapy Devices
- Microdermabrasion Devices
- Energy-Based Therapy Devices
- Microneedling
