The Steinberg Law Group has decades of experience in handling mesothelioma and other asbestos-related cases. With offices in New York, California and Texas, the Steinberg Law Group has a national footprint that helps win the best possible financial compensation for clients. [www.mesotheliomaoptions.com](http://www.mesotheliomaoptions.com)

Typically, asbestos exposure will have occurred sometime between the 1950s and the 1980s. Some of the most prevalent professions that encountered large quantities of asbestos include power plant workers, maritime workers, industrial workers, plumbers, pipefitters, electricians, mechanics, machinists, miners, railroad workers and construction workers, to name a few. Since the latency period for mesothelioma patients is approximately 40 years, most people diagnosed with mesothelioma or asbestos-related lung cancer in 2023 were exposed decades ago.

Alaska is home to numerous geological formations where naturally-occurring asbestos is known to form. These natural deposits often form adjacent to other minerals that are being mined, which can release extremely dangerous asbestos fibers into the air. Residents of Alaska who worked in industries such as shipbuilding, mining and power generation are at an increased risk of developing mesothelioma or asbestos-related lung cancer.
