Typically, asbestos exposure will have occurred sometime between the 1950s and the 1980s. Some of the most prevalent professions that encountered large quantities of asbestos include power plant workers, maritime workers, industrial workers, plumbers, pipefitters, electricians, mechanics, machinists, miners, railroad workers and construction workers, to name a few. Since the latency period for mesothelioma patients is approximately 40 years, most people diagnosed

Our Mesothelioma Options Help Centers have a network of top doctors and surgeons from coast to coast.

with mesothelioma or asbestos-related lung cancer in 2023 were exposed decades ago.

www.mesotheliomaoptions.com

Due to Idaho's deep history with the agricultural and industrial sectors, many residents of Idaho were exposed to asbestos for decades. Additionally, Idaho's place in the formative nuclear years of the twentieth century is an additional major source of asbestos exposure for many Idahoans as vast quantities of asbestos were used to deal with the excess heat and electricity produced as a byproduct of nuclear reactions. Idaho contains one commercial asbestos mine in Klamath as well as at least a half dozen naturally-occurring asbestos deposits mostly located in the panhandle. Residents of Idaho who worked in the steel, lumber and paper industries are also at a higher risk of developing an asbestos-related illness. www.mesotheliomaoptions.com

Known jobsites, companies and locations with asbestos exposure in Idaho include, but are not limited to, Ebrii Powerhouse, Raft River Turbine Generating Station, Priest River Landfill, Utah-Idaho Sugar Company, Amalgamated Sugar Company, Carnation Milk Products Company, A.E.C.
