Typically, asbestos exposure will have occurred sometime between the 1950s and the 1980s. Some of the most prevalent professions that encountered large quantities of asbestos include power plant workers, maritime workers, industrial workers, plumbers, pipefitters, electricians, mechanics, machinists, miners, railroad workers and construction workers, to name a few. Since the latency period for mesothelioma patients is approximately 40 years, most people diagnosed with mesothelioma or asbestos-related lung cancer in 2023 were exposed decades ago.

www.mesotheliomaoptions.com

Residents of Kentucky who worked in the plumbing, railroad, mining, farming, and construction industries are particularly susceptible to developing mesothelioma or other asbestos-related
