The air humidifiers refer to a device which raises humidity (moisture) levels in a single room or a whole building. Point-of-use humidifiers are typically used in the home to humidify a single room, whereas whole-house or furnace humidifiers that are connected to a home's HVAC system, supply humidity to the entire house. Humidifiers add moisture to the air, which can benefit people with respiratory symptoms or dry skin.

The main types of air humidifier products include portable humidifiers and whole-house humidifiers. Portable humidifiers refer to stand-alone devices that add moisture to the air of the room in which they are placed. Vaporizers, ultrasonic humidifiers, and evaporative humidifiers are among the various varieties of portable humidifiers, and each uses a different technology to add moisture to the air supply. The air humidifier are used in commercial, industrial, and residential setting and distributed through online and offline distribution channels.
