Lactose-free infant formula are used for infants with lactose intolerance. Lactose-free infant formula is designed for babies having difficulty digesting lactose that naturally occurs in breast and cow's milk. Infants with lactose intolerance may not completely digest the lactose in milk which can cause them health problems like gas, stomach rumbling, cramping, bloating, and diarrhea.

The main types of lactose-free infant formula are milk infant formula and non-milk infant formula. Milk infant formula is made from cows' milk which resembles breast milk. The indications segment consists of starting formula, specialized formula and follow-on formula that are made according to the age of the baby. The application type consists of premature, babies with galactosemia, infants with cow's milk protein allergies, and other applications. The distribution channel has supermarkets or hypermarkets, specialty stores, online retail stores and other distribution channels.
