The rolling stock refers to wheeled vehicles owned and used by a railroad or motor carrier used to maximize passenger capacity, enhance safety and security, and improve the bottom line. The main types of products in the rolling stock market are locomotives, rapid transit vehicles, and wagons. The locomotive rolling stock by entities is driven by diesel oil, or electricity as fuel it is an internal combustion engine where it burns heavy diesel oil and generates energy from that for the movement of the engine or it helps for the locomotion. The different locomotive technologies include conventional locomotive, turbocharge locomotive, and maglev and involve several components such as pantograph, axle, wheelset, traction motor, auxiliary power system, and others. The various end-users include passenger transit and cargo trains.
