Follicle-stimulating hormone is a hormone that the pituitary gland secretes and is involved in sexual maturation and reproduction. It has an impact on how well the testicles and ovaries work. Follicle-stimulating hormone assists in regulating both the ovaries' egg production and the menstrual cycle.

The main types of follicles stimulating hormones are recombinant FSH and urinary FSH.

Recombinant FSH (Follicle-Stimulating Hormone) is a type of FSH that is synthesized using recombinant DNA technology instead of being sourced from natural sources like urine. These are used for several applications, including infertility treatment, assisted reproductive technology (ART), and others, which are used by various end-users, such as infertility centers, hospitals, and others.
