Konstant Ranked among Top Flutter App Developers in India by Clutch

While Konstant are not restricted to any one, being called as a specialist feels good - Vipin Jain, CEO @ Konstant Infosolutions, upon latest listing in Clutch!

UNITED STATES, June 25, 2024 /EINPresswire.com/ -- Without scoring the exact numbers and statistics, it is widely known that Flutter's popularity surged last year, with over 2 million developers adopting it and over 1 million Play Store apps built with it.

Flutter as a [cross platform app development framework](), released in 2017, is known for faster development, flexibility to allow developers to create apps that work across Android and iOS, less cost of development, and customized solutions.

AI is changing how we work faster than ever. It accompanies many frameworks, programming languages and databases to deliver exquisite, unique, extraordinary solutions, customized to specific requirements. Flutter as a matter of fact is a platform that allows developers to build mobile apps that use artificial intelligence (AI).

Integrating AI into Flutter apps can create more engaging experiences for users and give apps a competitive edge. Flutter is combined with AI to make personalized recommendations, automate tasks, and improve user experience. It is being used to create apps that detect fraud and identify objects and places in the real world. Flutter with AI is also used to create apps to sell products and create conversational interfaces.

Recently Google announced updates to Flutter that focus on improving the developer

experience, including simplified Dart upgrades and advanced profiling tools. These updates are intended to make the development process more efficient and productive.

Further Dart 2.0 allows any [flutter app development company](#) in India to create class instances without using the "new" keyword, which can make Flutter code easier to type, read, and understand. In 2021, Amazon made Amplify Flutter available to help developers use AWS services with their Flutter apps. This could be a significant selling point for companies considering Flutter, as AWS is a leading cloud services provider.

Keeping latest development in this space in mind, Clutch allotted a place to Konstant in its latest listing of top Flutter App Developers in India.

About Clutch
It is a B2B research firm that forms the basis of most other research firms' listings. It is widely accepted and anticipated.

About Konstant Infosolutions
