Some of the key facts of the Diabetic Retinopathy Market Report:

The Diabetic Retinopathy market size is anticipated to grow with a significant CAGR during the study period (2020-2034)

Diabetic retinopathy (DR) is a significant neurovascular complication of diabetes, causing blindness in adults who are in their working years. The American Academy of Ophthalmology reports that with diabetes affecting an estimated 387 million people globally, a number expected to increase to 592 million by 2035, DR impacts approximately 93 million individuals worldwide. Diabetic retinopathy progresses through several stages: mild, where microaneurysms first appear; moderate, where blood vessels begin to lose their function; severe, involving blockages in blood vessels leading to the growth of new ones; and proliferative, the advanced stage characterized by the onset of new blood vessel formation.

The primary choices for initial treatment are three anti-VEGF medications: EYLEA (aflibercept), LUCENTIS (ranibizumab), and AVASTIN (bevacizumab).
