Definition: Tetanus toxoid vaccine is a preparation made from the toxin produced by the bacterium *Clostridium tetani*. This vaccine is used to induce immunity against tetanus, a potentially deadly bacterial infection characterized by severe muscle spasms. The vaccine contains inactivated tetanus toxin (toxoid) that stimulates the immune system to produce antibodies against tetanus, providing protection against the disease. Routine vaccination with tetanus toxoid is essential to prevent tetanus infections, particularly after injuries or wounds that could potentially expose individuals to the bacteria.

Market Trends:

- Increasing Immunization Programs
- Shift towards Combination Vaccines
