Surge in need to strengthen audit and compliance processes across organizations, rise in adoption of cloud solutions & services, prevalence of digital transformation initiatives, and growth in awareness of business process understanding & analytics among organizations are expected to drive the growth of the global process mining software market. Increase in internet penetration and rapid adoption of automation and digital technology during the pandemic had a positive impact on the market.

The process mining software market is segmented on the basis of component, deployment

mode, enterprise size, application, industry vertical, and region. On the basis of component, the market is bifurcated into software and services. Depending on services, the market is divided into professional services and managed services. Depending on professional services, the market is further classified into training & education, integration & deployment, and support & maintenance. By organization size, it is categorized into large enterprises and SMEs. On the basis of deployment, the market is divided into cloud and on-premise. Depending on application, the market is segregated into strategic sourcing, contract management, category management, transactional procurement, and supplier management. By industry vertical, the market is fragmented into BFSI, healthcare, retail, manufacturing, IT & telecom, logistics, and others. Region wise, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA.

COVID-19 Scenario:

□ The process mining software market experienced a positive impact, owing to the stringent regulatory procedures imposed by governments of various countries across the globe.

□ Lockdowns resulted in an increase in internet penetration, and hence it paved way for rapid technological advancements along with the digital transformation initiatives taken by governments of some countries.

□ There was an increase in the adoption of numerous breakthrough merging technologies such as the Industrial Internet of Things (IIoT), artificial intelligence (AI)-powered solutions, simulation technology, big data, analytics, and cloud-based technologies.

□ In addition, surge in investment in advanced technology and increase adoption of AI and ML technology by organizations are further expected to create ample opportunities for the industry.
