

# Rising Star Optometry Adopts New Cutting-Edge Optometry Tech.

SAN FRANCISCO, CANADA, NORTH AMERICA, July 17, 2024

/EINPresswire.com/ -- [Rising Star Optometry](#) is thrilled to announce the adoption of cutting-edge technologies that enhance the practice and elevate patient care. Rising Star Optometry has invested in advanced tools to provide superior eye care services, and is committed to optimizing visual performance for school, work, and play.

Among the new technologies is the LifeMeter, an innovative device that measures skin carotenoid levels. These levels directly correlate with macular carotenoids, which are critical for vision performance and overall eye health. By assessing these vital indicators, Rising Star Optometry can offer personalized and proactive eye health management, ensuring patients receive the most effective treatments for maintaining optimal vision.

Additionally, Rising Star Optometry has integrated the Optos widefield retinal imaging system into their practice. This state-of-the-art technology allows for a comprehensive view of the back of the eye without dilation. Widefield retinal imaging provides a detailed picture, enabling the early detection and management of eye conditions such as retinal tears, detachments, and other retinal disorders. This advanced imaging system ensures that patients undergo thorough, yet comfortable, [eye examinations](#), enhancing the accuracy and efficiency of diagnoses.
