## Growth Driver Of The Acute Lymphocytic-Lymphoblastic Leukemia Therapeutics Market

The growing prevalence of genetic conditions is expected to propel the growth of the acute lymphocytic-lymphoblastic leukemia (ALL) therapeutics market going forward. Genetic conditions are medical conditions that are caused by changes (mutations) in an individual's DNA or genes. Gene mutations can build up in cells in the body over time, and cells with too many mutations may stop working normally, grow out of control, and become cancerous. Genetic testing is used therapeutically to discover particular genetic anomalies in individuals with acute lymphocytic-lymphoblastic leukemia, which can assist in informing therapy choices.
