

NSN Components Supplier ASAP Semiconductor Announces Continued Expansion of Items on ASAP Parts Distribution Services

ASAP Semiconductor continues efforts to establish ASAP Parts Distribution Services as a reliable platform for NSN sourcing with expanded offerings and services.

ANAHEIM, CA, UNITED STATES, September 10, 2024 /EINPresswire.com/ -- ASAP Semiconductor, a

With the expansion of ASAP Parts Distribution Services, we are enhancing access to in-demand NSN components that meet rigorous industry standards, ensuring solutions for every operation."

Joe Faruqui

California-based distributor of aerospace, defense, and industrial components, is announcing the continued development of its website ASAP Parts Distribution Services with an addition of new [National Stock Number \(NSN\) listings](#) and improved fulfillment processes. This commitment coincides with the company's efforts to expand upon its curated purchasing platform, where ASAP Parts Distribution Services will specifically serve to provide various NSN offerings that cater to aviation, defense, and government procurement needs.

As global industries face a rising need for reliable and simplified options for sourcing required part numbers, the NSN system remains steadfast with its standardized approach of classifying items and acceptance by all NATO countries and allies. While part numbers may overlap between manufacturers, NSNs are unique and can contain offerings from multiple entities that share specifications and design features. In recognition of the various benefits posed by the NSN system, ASAP Semiconductor has committed to strategically extend the portfolio of parts available on the platform while providing various resources for NSN identification and search. As ASAP Parts Distribution Services has specifically been established by the company to organize its selection of aviation offerings, newly added NSN items will range from airframe materials and engine components to cockpit avionics and electrical system parts.

Part of this planned expansion involves continued development of the purchasing platform in regards to product lists, search features, and resources. For example, the website is outfitted

with catalogs that allow customers to specifically peruse items by aircraft part type, NSN, [National Item Identification Number \(NIIN\)](#), and much more. To further support aviation, defense, and government procurement officers who leverage NSN information for search, collections are also managed for Federal Supply Groups (FSG) and Classes (FSC). Alongside such lists, the website will also be updated as necessary to provide search tools and resources for locating parts by FSCs and other elements of an NSN.

As ASAP Semiconductor maintains its status as an AS9120B, ISO 9001:2015, and FAA AC 00-56B accredited distributor with recent passing of audits and inspections, the inventory

of ASAP Parts Distribution Services is being extended in accordance with the company's quality-assurance practices. This comes at a time when the company has been expanding and improving upon its quality inspection team to have newly stocked items in this effort subject to all necessary measures.

To further support its expansion efforts, ASAP Semiconductor has been forging new relationships and partnerships with manufacturers, suppliers, and other key players in the industry. These connections allow the company to continually increase its inventory of [NSN components](#) on ASAP Parts Distribution Services, as well as allow it to serve such customers as a purchasing arm for various needs. Additionally, the website maintains its online Request for Quote (RFQ) feature, where customers are provided procurement options and services by the ASAP Semiconductor team.

Looking forward, ASAP Semiconductor plans to continue improving upon the offerings and services that are presented through ASAP Parts Distribution Services, with a particular focus remaining on the supply of NSN part types that cater to a wider range of industries. The company is also exploring opportunities to enhance the platform's capabilities, including the integration of new technologies that will further streamline the procurement process. These developments will be announced as they come to be, with updates regularly provided on the website and other media outlets. For more information about ASAP Parts Distribution Services and its extensive range of offerings, please visit the website at <https://www.asappartsdistributionservices.com/> or contact ASAP Semiconductor directly.

ASAP Parts Distribution Services - NSN Parts Sourcing
