Flexible intermediate bulk containers' little weight reduces the overall weight of bulk packaging. Several FIBCs can be folded and pressed together to store them in a small area. The flexible woven polypropylene (PP) used to make FIBCs can support weights ranging from 500 kg to 2,000 kg. Products that are dry and flowable, like grains, seeds, salts, chemicals, sands, clays, cement, and more, are frequently stored in these flexible intermediate containers. Handling small-size materials and raw, semi-finished, and completed granules in industrial settings is the main end application of FIBC.

Key regions covered in the report include North America, Europe, Asia-Pacific, South America, and the Middle East and Africa.

- North America (the United States, Canada, and Mexico)
- Europe (Germany, UK, France, Italy, Russia, Turkey, etc.)
- Asia-Pacific (China, Japan, Korea, India, Australia, and Southeast Asia (Indonesia, Thailand, Philippines, Malaysia, and Vietnam))
- South America (Brazil etc.)
- The Middle East and Africa (North Africa and GCC Countries)

Numerous end-use sectors, including food, chemical, pharmaceutical, building and construction, agriculture, mining, manufacturing, and waste processing, employ flexible intermediate bulk containers, or FIBCs. Because the pharmaceutical business is expanding globally due to an aging population and an increase in chronic diseases, the need for FIBC in this sector is anticipated to

develop more quickly.
