

Kimtron installs Cannabis Decontamination system #20 in the state of Maine

OXFORD, CT, UNITED STATES,
November 29, 2024 /

EINPresswire.com/ -- Since late 2021, Kimtron has been supplying industry-leading decontamination systems to the cannabis industry and has recently installed HiRad System # 20 into a new cultivation facility in Maine.

Peter Cawley, Kimtron CEO states; "The industry is coming to realize that electrically initiated x-ray ([Photon Purification®](#)) has proven the most effective means of eliminating pathogens in cannabis. While other technologies do exist, nothing but photons at a specific wavelength fully penetrate the plant, leaving nothing destroyed but potentially harmful pathogens.

Cawley further states; "In terms of x-ray-based decontamination technology, the industry is also seeing the superior reliability of Kimtron equipment, which is directly related to the industrial-strength components produced right here in our US-based facility. Nothing has proven more reliable, and no competitive equipment rivals Kimtron's warranty and low cost of ownership"

David Somoroff, Kimtron VP of Marketing states; "One of the key metrics we use to measure our success is customer satisfaction. While 20 systems may not sound like a lot, and accounts for only a small percentage of our total installed base across all industries, we're very proud of the fact we have maintained 100% cannabis customer satisfaction – half of whom have authorized us to use them as actual testimonials!"

About the Company

Kimtron Inc. was formed in 1991 and is ISO-9001 certified design and manufacturing firm of

Kimtron Technicians install and validate a HiRad-6001 at a cultivation facility in ME

patented, proprietary X-ray systems and components.
