Oral Thin Films Global Market Report 2024 - Market Size, Trends, And Global Forecast 2024-2033

The oral thin films market has experienced rapid growth in recent years. It is expected to rise from \$4.07 billion in 2023 to \$4.6 billion in 2024, with a compound annual growth rate (CAGR) of 13.0%. This growth in the historical period can be attributed to factors such as improved patient compliance, the needs of pediatric and geriatric patients, fast drug delivery, the prevalence of chronic diseases, and the availability of over-the-counter (OTC) medications.

“

The oral thin films market size is expected to see rapid growth in the next few years. It will grow to \$7.65 billion in 2028 at a compound annual growth rate (CAGR) of 13.6%.”

What Is Driving the Growth of the Oral Thin Films Market?

The growing demand for thin film drug delivery systems is driving the expansion of the oral thin film market. Thin films are seen as a promising alternative to traditional dosage forms. They

offer a convenient, self-administered, and fast-dissolving method for delivering medications, making them a flexible drug delivery platform. Since thin films are taken orally and do not require water for absorption, they are more patient-friendly due to their quick dissolution rate. As a result, the rising demand for thin-film drug delivery systems is contributing to the increased demand for oral thin films.
