“

Aerosols refer to systems in which tiny particles or droplets are suspended in a gas. These systems can be either natural (like fog or dust) or manufactured (like spray cans).”

*David Correa*

Aerosols are colloidal systems of solid or liquid particles dispersed in a gas. In the atmosphere, they exist as fine particulate matter, encompassing a wide range of sizes from nanometers to micrometers. These particles can be emitted directly into the air or formed through the transformation of gaseous pollutants. The composition of aerosols varies and includes mineral dust, sea salt, organic compounds, and soot.
