

Tendinopathy Market Poised for Remarkable Growth by 2034, Reveals DelveInsight

Leading companies such as MiMedx Group, R3 Stem Cell, and Novartis, are driving advancements in Tendinopathy treatments to enhance patient care.

LAS VEGAS , NV, UNITED STATES, January 21, 2025 /EINPresswire.com/ -- DelveInsight's "Tendinopathy Market Insights, Epidemiology, and Market Forecast-2034" report offers an in-depth understanding of Tendinopathy, including historical and forecasted epidemiology, as well as Tendinopathy market trends in the United States, EU4 (Germany, Spain, Italy, France), the United Kingdom, and Japan.

The latest healthcare forecast report delivers a comprehensive analysis of Tendinopathy, offering critical insights into prevalence, revenue trends, and evolving Tendinopathy treatment options. The report discusses key statistics, including current and projected market sizes, while delving into Tendinopathy symptoms and their impact on patients' quality of life.

It evaluates the progress and effectiveness of emerging therapies for Tendinopathy and examines the clinical trial landscape in-depth. This includes a detailed review of ongoing and upcoming studies to shape the future of tendinopathy treatment. With its rich data and forward-looking insights, this report serves as an indispensable resource for understanding market dynamics and advancements in the field of Tendinopathy.

Some of the key insights of Tendinopathy Market Report:

- The incidence of Tendinopathy cases is on the rise, with the United States accounting for over 12 million cases in 2023.
- Among gender-specific tendinopathy incident cases, males are the primary contributors compared to females in the United States.
- Tendinitis and tendinosis are the primary types of tendinopathy, with tendinosis accounting for the highest number of cases in 2023.
- The treated cases of tendinopathy in the United States were estimated at 6 million in 2023, with expectations for growth during the forecast period.
- The Tendinopathy market size in the 7MM (United States, EU5, Japan) is expected to grow at a

significant CAGR during the study period (2020-2034).

- In December 2024, Trice Medical received FDA 510(k) clearance for the Tenex® 2nd Generation System, which features an improved console with enhanced usability and durability, along with an expanded MicroTip for deeper tissue applications. The Tenex 2nd Generation system advances the treatment of chronic refractory tendinopathy, bone spurs, and diabetic foot ulcers.
- In January 2024, the sam® 2.0 long-duration wearable ultrasound unit from ZetrOZ Systems received FDA clearance for expanded indications to treat soft tissue injuries and knee osteoarthritis, making the device more accessible to patients with a broader range of medical conditions.
- Emerging therapies for Tendinopathy include CWT-001, COSENTYX, and others.
- Key companies in the Tendinopathy treatment market include MiMedx Group, R3 Stem Cell, Novartis, University of Wisconsin-Madison, General Electric, Ipsen, Orthocell Limited, and others.

Tendinopathy Overview

Tendinopathy refers to a group of disorders affecting the tendons, characterized by pain, swelling, and impaired function. It is commonly caused by repetitive strain, overuse, or injury, leading to inflammation, microtears, and degenerative changes within the tendon. The condition is most prevalent in individuals over 45, although increasing cases are being diagnosed among younger populations, especially with diabetes, which has a higher risk of tendinopathy. Tendinitis (inflammation of the tendon) and tendinosis (degeneration of the tendon) are the most common forms of tendinopathy. As the global incidence rises, particularly in developed countries like the United States and the UK, new treatment options are emerging, including advanced therapies and devices aimed at alleviating pain and promoting healing. Despite the advancements, tendinopathy remains a significant healthcare burden, impacting quality of life and leading to long-term disability in some cases.

Tendinopathy Epidemiology

The epidemiology section offers an overview of historical, current, and projected trends in the seven major countries (7MM) from 2020 to 2034. It helps identify the factors influencing these trends by examining various studies and perspectives from key opinion leaders. Additionally, the section provides an in-depth analysis of the diagnosed patient population and future trends.

The Tendinopathy market report offers epidemiological analysis for the study period 2020–2034 in the 7MM segmented into:

- Total incident cases of Tendinopathy
- Total gender-specific cases of Tendinopathy
- Type-specific cases of Tendinopathy

- Region-specific cases of Tendinopathy
- Total treated cases of Tendinopathy

Tendinopathy Drugs Uptake and Pipeline Development Activities

The drug uptake section examines the adoption rates of newly launched and upcoming Tendinopathy drugs over the study period. It analyzes the uptake of these treatments, evaluating how patients adopt these therapies and the sales performance of each drug. This section offers a comprehensive look at the factors influencing the acceptance and success of tendinopathy treatments in the market.

In addition, the therapeutics assessment section highlights the tendinopathy drugs that have experienced the fastest uptake. It delves into the key drivers behind their widespread use and provides a market share comparison among these drugs. This section helps identify which therapies are gaining traction and the reasons behind their rapid adoption.

The report further explores the tendinopathy pipeline, providing insights into therapeutic candidates at different stages of development. It identifies the key companies involved in creating targeted Tendinopathy treatments. The report also covers recent developments in the field, including collaborations, mergers, acquisitions, licensing agreements, and other significant updates on emerging therapies for Tendinopathy.

Tendinopathy Market Outlook

The tendinopathy treatment market is undergoing significant advancements as companies actively develop innovative therapies. Approximately 40-50% of patients currently rely on physiotherapy as a primary management strategy. Meanwhile, oral supplementation has emerged as a promising approach, with supplements like glucosamine, chondroitin sulfate, vitamin C, hydrolyzed type 1 collagen, curcumin, boswellic acid, and methylsulfonylmethane showing potential in promoting tendon healing.

However, evaluating the efficacy of individual substances remains challenging due to the frequent use of multivitamin combinations, particularly among athletes and the general population. Nonsteroidal anti-inflammatory drugs (NSAIDs), delivered both orally and topically, provide effective short-term pain relief, while corticosteroid injections are commonly used to alleviate inflammation and pain in tendinopathy cases. Additionally, platelet-rich plasma (PRP) therapy has gained recognition as a valuable option for managing tendinopathy.

The tendinopathy pipeline continues to grow, featuring potential drugs in both monotherapy and combination therapy forms. Nutraceuticals are also gaining attention as viable candidates for reducing symptoms, preventing tendon ruptures, and aiding recovery following trauma or surgery, highlighting a dynamic and evolving landscape in tendinopathy management.

Tendinopathy Market Drivers

- The increasing prevalence of tendinopathy, especially among the aging population and those with diabetes, is driving demand for treatments.
- New innovations, like the FDA-approved Tenex® 2nd Generation System and wearable ultrasound devices, are improving patient outcomes and expanding treatment options.

Tendinopathy Market Barriers

- The cost of advanced therapies and medical devices limits access for many patients, restricting market growth.
- Many tendinopathy cases go undiagnosed or misdiagnosed, delaying treatment and hindering early intervention.

Scope of the Tendinopathy Market Report

- Study Period: 2020–2034
- Coverage: 7MM [The United States, EU5 (Germany, France, Italy, Spain, and the United Kingdom), and Japan]
- Key Tendinopathy Companies: MiMedx Group, R3 Stem Cell, Novartis, University of Wisconsin-Madison, General Electric, Ipsen, Orthocell Limited, and others.
- Key Tendinopathy Therapies: CWT-001, COSENTYX, and others.
- Tendinopathy Therapeutic Assessment: Tendinopathy currently marketed, and Tendinopathy emerging therapies
- Tendinopathy Market Dynamics: Tendinopathy market drivers and Tendinopathy market barriers
- Competitive Intelligence Analysis: SWOT analysis, PESTLE analysis, Porter's five forces, BCG Matrix, Market entry strategies
- Tendinopathy Unmet Needs, KOL's views, Analyst's views, Tendinopathy Market Access and Reimbursement
