Empliciti Global Market Report 2025 – Market Size,
Trends, And Global Forecast 2025-2034

Is the [Empliciti Market](#) Set to Witness Substantial Growth?

The Empliciti market has seen significant expansion recently, with an expected compound

annual growth rate CAGR of XX% over the next few years.

The market has grown from \$XX million in 2024 and is expected to reach \$XX million in 2025. This robust growth can be largely attributed to the approval and adoption of Empliciti, an increase in the incidence of multiple myeloma, a growing focus on cancer immunotherapy, and improvements in patient education and healthcare infrastructure.

Furthermore, the Empliciti market is expected to grow to \$XX million in 2029 with a compound annual growth rate CAGR of XX%. This anticipated growth for the forecast period can be attributed to the expansion into new indications, continued rise in incidence of multiple myeloma, approvals for additional indications, and improved patient access programs. There are several prominent trends in the forecast period including advancements in immuno-oncology, growing demand for personalized medicine, developments in cell and gene therapy, integration

of immunomodulatory drugs imids, and enhanced delivery systems.

What Drives The [Empliciti Market Growth](#)?

An important driving factor for the future growth of the Empliciti market is the increasing prevalence of multiple myeloma. Multiple myeloma is a cancer that affects the plasma cells, a type of white blood cell found in bone marrow. The disease leads to abnormal cell growth and can cause damage to bones, kidneys, and the immune system. With an aging population and improved diagnostic techniques, the prevalence of this disease is set to increase in the coming years. Empliciti targets the SLAMF7 protein on myeloma and natural killer NK cells, aiding in the immune system's ability to detect and remove cancer cells. It enhances NK cell functions and promotes antibody-dependent cellular cytotoxicity ADCC, helping disease progression to slow when combined with other treatments.
