## Prime Determinants of Growth

Rise in passengers and increase in government rules & regulations for passenger safety are the factors expected to propel the growth of the global aviation insurance market. However, costly aviation insurance premiums and increase in frequency and cost of claims are anticipated to hamper the growth of the global market. On the contrary, the surge in the number of international airlines is further expected to create lucrative opportunities for the growth of the global market.

The Passenger Liability Insurance segment dominated the market in 2022

By type, the passenger liability insurance segment held the highest market share in 2022, accounting for more than one-third of the aviation insurance market revenue and is estimated to maintain its leadership status during the forecast period, owing to stringent government regulations making it compulsory to avail passenger liability insurance to protect damages to the passengers. Moreover, companies majorly focus on creating novel opportunities for growth and revenue generation, thereby increase the preference for AI and advanced machine learning algorithms across industries, which is further expected to propel the overall market growth. However, the in-flight Insurance segment is expected to attain the largest CAGR of 8.6% from

2023 to 2032 and is projected to maintain its lead position during the forecast period, owing to increasing cases of airline accidents from various causes such as bird collision, bad weather, engine failure, and other, which drives the segment growth in the aviation insurance market.

The airlines segment to maintain its lead position during the forecast period  
By product type, the airlines segment accounted for the largest share in 2022, contributing more than one-third of the aviation insurance market revenue, owing to growth in the need for more flexible and customized insurance solutions adapted to the special needs and risk profiles of particular airlines, which is further expected to propel the overall market growth. However, the aerospace segment is expected to attain the largest CAGR of 9.0% from 2023 to 2032 and is projected to maintain its lead position during the forecast period, owing to advanced technologies to enhance their capabilities in analyzing and quantifying risks, improving pricing accuracy, and delivering personalized insurance solutions that meet the unique needs of aerospace clients. These factors drive the growth of this segment in the global aviation insurance market.

The commercial aviation insurance segment to maintain its lead position during the forecast period  
By application, the commercial aviation insurance segment accounted for the largest share in 2022, contributing more than half of the aviation insurance market revenue, owing to high hull values and high liability limits associated with aviation insurance policies. Most insurance carriers must purchase insurance to help spread the risk, preventing anyone claim from bankrupting a company, which is further expected to propel the overall market growth. However, the general and business aviation insurance segment is expected to attain the largest CAGR of 8.0% from 2023 to 2032 and is projected to maintain its lead position during the forecast period, owing to increase in demand for travel and tourism with airlines and increase in number of sky diving institutes. These factors drive the growth of this segment in the global aviation insurance market.

Asia-Pacific region to maintain its dominance by 2032  
By region, North America held the highest market share in terms of revenue in 2022, contributing more than one-third of the aviation insurance market revenue, owing to strong domestic demand from the U.S., one of the largest domestic aviation markets in the world, which is anticipated to propel the growth of the market in this region. However, Asia-Pacific is projected to attain the highest CAGR of 8.7% from 2023 to 2032, owing to economically emergent countries such as China and India, which have manufacturing plants of several industries in the Asia-Pacific region, which further is expected to contribute to the growth of the market in this region.
