What Drives the Biopoin Market Growth?

The increasing prevalence of chronic kidney disease (CKD) is a major factor fueling market expansion. CKD is a progressive condition that impairs the kidney's ability to filter waste and excess fluids, often linked to rising cases of diabetes, hypertension, and unhealthy dietary habits. A key consequence of CKD is reduced erythropoietin production, leading to anemia characterized by fatigue and weakness.

Biopoin, which contains epoetin theta, plays a crucial role in addressing this issue by stimulating red blood cell production, enhancing hemoglobin levels, and improving patients' quality of life.
