

Infocap CEO Nathaniel Palmer named to 'Top 30 AI Leaders to Follow in 2025'

Nathaniel Palmer Named Top AI Leader for 2025: Revolutionizing Industries with Innovation!

WASHINGTON, DC, UNITED STATES, March 5, 2025 /EINPresswire.com/ -- [Infocap](#) AI Corp is pleased to announce that CEO Nathaniel Palmer has been named to the prestigious list "[Top 30 AI Leaders to Follow in 2025](#)"

The "Top 30 AI Leaders" list was carefully selected by the PEX Network team from industry leaders who demonstrated outstanding contributions in AI-driven process excellence. Criteria for selection included expertise, impact on their industry, thought leadership, published work and global influence. As a best-selling author and intelligent

automation pioneer, Nathaniel has led many of the largest and most complex initiatives across government and private industry, totaling over \$3.5 billion in research and development toward AI and digital transformation. His latest book, "Gigatrends" (Post Hill Press 2024) hit #1 for AI and Machine Learning on Amazon's "Hot New Release" list.

AI is everywhere—yet its potential is realized virtually nowhere. Despite the ever-growing number of Generative AI tools, the disconnect between expectations and reality remains significant. As CEO of Infocap AI Corp, today Nathaniel leads a team of platform engineers, data scientists, and AI professionals who excel at co-innovating solutions that solve critical challenges and drive extraordinary value.

Infocap has delivered some of the most effective AI-powered automation which transform processes to unlock potential in the human workforce, not by simply mimicking but extending

human capabilities. “AI needs to explain its reasoning clearly for every action it takes,” Nathaniel explains, “rather than operating within a black box as it typically does today, for AI to be trusted to take action, it must be a glass box.”

This is the promise of Human-Centric Automation—ensuring that every automated outcome is observable, explainable, and accountable. The work which Infocap has pioneered delivers AI-powered capabilities which are human-like: the same work as performed by humans but with the efficiency, accuracy, and predictability otherwise only possible through automation.
