

Prevent Pet Suffocation Data Supports Suffocation Assessment of Pet Food Containers

Center for Pet Safety conducted evaluations of pet food/pet litter containers to assess for suffocation risk in alliance with Prevent Pet Suffocation.

HOUSTON, TX, UNITED STATES, March 19, 2025 /EINPresswire.com/ -- [Center for Pet Safety](#) (CPS), the 501(c)(3)

research and consumer advocacy organization dedicated to consumer and companion animal safety, teamed up with [Prevent Pet Suffocation](#) (PPS) to reduce pet suffocation events in plastic pet food containers.

“

Data collection on pet suffocation-related events is critical for pet owners to understand the risks to pets, as too many are unaware of pet suffocation until it happens to them.”

Bonnie Harlan, Founder of Prevent Pet Suffocation

there are pet food/pet litter containers on the market that reduced or eliminated the possibility of suffocation-related deaths.

“PPS and CPS share a mutual mission in promoting pet and animal safety”, said Bonnie Harlan, Founder of Prevent Pet Suffocation. “Data collection on pet suffocation-related events is critical for pet owners to understand the risks to pets, as too many are unaware of pet suffocation until

it happens to them."

After evaluating five different containers with different types of latch/closure design and location, Center for Pet Safety identified the Gamma2 Vittles Vault Airtight Dog Food Storage Container with a screw-on lid as the style of pet food/pet litter container that would significantly reduce suffocation risks. Pet owners are advised to transfer pet foods and pet litter into containers with screw-on lids.

The full report is posted on the CPS website. Click here to access the [Pet Container Evaluation Report](#).
