Anticipated Growth for the Next-Generation Immunotherapies Market:

The next generation immunotherapies market size is expected to see rapid growth in the next few years. It will grow to \$238.04 billion in 2029 at a compound annual growth rate CAGR of 12.1%. The growth in the forecast period can be attributed to increasing prevalence of cancer, rising healthcare expenditure, growing adoption of chimeric antigen receptor CAR t-cell therapy, rising burden of chronic diseases, and increasing research in the area of next-generation drugs. Major trends in the forecast period include shift toward combination therapies, technological advancements, innovation in therapeutic approaches, advancements in personalized medicine, and regulatory support advancements.

Primary Market Drivers:

The increasing prevalence of cancer is expected to propel the growth of the next-generation immunotherapies market going forward. Cancer is a group of diseases characterized by the uncontrolled growth and spread of abnormal cells in the body. The prevalence of cancer is due to factors such as aging populations, lifestyle changes, environmental exposures, and improved

detection methods. Next-generation immunotherapies provide advanced, targeted treatments that enhance the body's immune response to cancer, offering greater effectiveness, durability, and personalization.
